PROFESSIONAL SUMMARY

Backend-focused Computer Science (AI/ML) student graduating June 2026 with hands-on experience building production-grade REST APIs using Python, Django, Django REST Framework, Flask, and FastAPI. Comfortable with JWT-based authentication, PostgreSQL schema design with composite indexing, asynchronous task processing using Celery + Redis, and containerized deployment with Docker Compose. Internship experience optimizing queries and shipping APIs; freelance experience delivering full backend systems and integrating ML models (PyTorch) into API services. Strong interest in scalable backend architecture and clean API design.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, Java (basic)

Backend Frameworks: Django, Django REST Framework, Flask, FastAPI

Databases & ORMs: PostgreSQL, MySQL, SQLite, SQLAlchemy, Django ORM

APIs & Auth: REST APIs, JWT (SimpleJWT), OpenAPI/Swagger, Postman, API design

Async & Infra: Celery, Redis, Gunicorn, Docker, Docker Compose

DevOps & Deployment: Git, GitHub, Railway, Vercel, Linux (basic), CI/CD basics

ML / Data: PyTorch, scikit-learn, Pandas, NumPy, model-API integration

Tools & Practices: VS Code, Pytest (basics), virtual environments, environment-based configs

EXPERIENCE

Backend Developer Intern — ANV Tech Solutions

July 2025 – August 2025 | Remote

- Built and shipped RESTful APIs using Django and FastAPI for internal application workflows, handling request validation, authentication, and structured error responses.
- Designed PostgreSQL schemas and optimized SQL queries, reducing average response time on key endpoints through indexing and query refactoring.

Freelance Backend Developer — Self-Employed

2025 – Present | Remote

- Delivered backend and full-stack projects sourced through LinkedIn, including **CuraLink** (curalink-lyart.vercel.app), an AI-powered research website with API-driven search and content generation workflows.
- Built end-to-end backend services with FastAPI/Flask, integrated PostgreSQL/SQLite databases, and deployed using Docker, Railway, and Vercel.
- Managed client communication, requirement scoping, and project delivery timelines independently.

PROJECTS

LungCare+ — FastAPI, PyTorch, JavaScript, PostgreSQL, Railway | [Live Demo](#)

- Built a healthcare platform with a FastAPI backend serving CNN-based lung cancer predictions from CT scan uploads.
- Designed REST endpoints for scan uploads, predictions, and patient data with request validation and structured routing.
- Integrated a PyTorch CNN model into the API layer with an inference pipeline handling preprocessing and confidence scoring.
- Deployed on Railway with environment-based production configuration and secure credential handling.

Paragraph Indexer API — Django, DRF, PostgreSQL, Celery, Redis, Docker, JWT | [GitHub](#)

- Built a Django REST Framework API for bulk paragraph ingestion and word-frequency search, with a custom email-based user model and JWT auth (SimpleJWT access + refresh tokens).
- Designed an async indexing pipeline with Celery + Redis: submitted text is tokenized off the request cycle and persisted with per-word occurrence counts.
- Optimized PostgreSQL schema with a composite index on (user, word, count) for an efficient top-10 ranked search endpoint; ensured idempotent re-indexing via single-transaction rewrites.
- Containerized the full stack (web, worker, beat, Postgres, Redis) with Docker Compose; exposed OpenAPI/Swagger docs via drf-spectacular and runs under Gunicorn.

Django Food Ordering App — Python, Django, SQLite, Django ORM | [GitHub](#)

- Created a database-driven food ordering application with full CRUD support, dynamic template rendering, and end-to-end order processing workflows.
- Designed relational models for menus, orders, and customers; implemented URL routing and Django ORM-based queries for order tracking and admin views.

EDUCATION

B.Tech, Computer Science (AI/ML) — Moradabad Institute of Technology, Moradabad

August 2022 – June 2026 | Current: 73%

COURSEWORK, AWARDS & CERTIFICATIONS

Coursework: OOP, Data Structures & Algorithms, DBMS, Operating Systems, Python, Machine Learning | **Certifications:** HackerRank Basic Python; Java Full Stack — Ducat (2024); First Prize — Smart Work Competition
